Data in Many Forms...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are available in print or electronic format. Maps and other geographic reference materials are available for some types of data. In some cases, workshops and seminars have been developed to provide additional information on some subjects.

How to Obtain More Information

Inquiries about products and services should be directed to your local Statistics Canada Reference Centre:

St. John's	(709) 772-4073	Winnipeg	(204) 983-4020
Halifax	(902) 426-5331	Regina	(306) 780-5405
Montréal	(514) 283-5725	Edmonton	(403) 495-3027
Ottawa	(613) 951-8116	Calgary	(403) 292-6717
Toronto	(416) 973-6586	Vancouver	(604) 666-3691

For users who reside outside the local dialing area of the Regional Reference Centres, a toll-free number is provided:

Des données sous plusieurs formes...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations normalisées et spéciales sont disponibles sur support papier ou électronique. Des cartes et d'autres documents géographiques de référence sont disponibles pour certains genres de données. Dans certains cas, des ateliers et des séminaires procurent des renseignements complémentaires sur certains sujets.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet des produits et services doivent être adressées au centre de consultation de Statistique Canada de votre région :

St. John's	(709) 772-4073	Winnipeg	(204) 983-4020

Note of Appreciation

Canada owes the success of its statistical system to a long-standing cooperation involving Statistics Canada, the population of Canada, its businesses and governments. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

Note de reconnaissance

Le succès du système statistique du Canada repose sur un partenariat bien établi entre Statistique Canada et la population, les entreprises et les administrations canadiennes. Sans cette collaboration et cette bonne volonté, il serait impossible de produire des statistiques précises et actuelles. Canadian Cataloguing in Publication (Data)

Preface

This publication, which is part of Statistics Canada's *Dimensions Series*, is one of the many products highlighting data from the 1991 Census of Population and Housing. Comprehensive data from this and previous censuses are combined to provide a perspective of demographic, economic and sociological issues.

The *Dimensions Series* contains twenty-two individual reports, each profiling a specific topic or population group through the use of detailed cross tabulations. Certain reports feature historical trends. All of the reports provide national data, while some furnish details for provinces and territories, and other geographic levels.

Expanding on the basic data found in *The Nation Series*, the *Dimensions Series* is a fundamental source for analysis and complements Statistics Canada's analytical series entitled *Focus on Canada*. Together, these three series furnish a comprehensive source of data and information about demographic trends in Canada.

This series was developed with the help and cooperation of our data users. I would like to express my appreciation to those who so willingly participated in our user consultation. Their contributions enabled us to develop products and services that will hopefully be of broad interest to many Canadians.

Ivan P. Fellegi Chief Statistician of Canada

Préface

La présente publication, qui fait partie de la série *Dimensions* de Statistique Canada, représente l'un des nombreux produits mettant en lumière les données du recensement de la population et des logements de 1991. Des données complètes tirées du recensement de 1991 sont combinées à celles des recensements antérieurs en vue de donner une perspective d'ensemble sur des questions d'ordre démographique, économique et sociologique.

La série *Dimensions* comprend vingt-deux rapports distincts, chacun dressant le profil d'un sujet particulier ou d'un groupe de population à l'aide de tableaux croisés détaillés. Certains des rapports mettent en lumière les tendances chronologiques. Tous les rapports présentent les données à l'échelle nationale tandis que certains d'entre eux donnent également des renseignements détaillés pour les provinces et les territoires, ainsi que pour d'autres niveaux géographiques.

En permettant un examen plus élaboré des données de base trouvées dans la série *Le pays*, la série *Dimensions* représente une source essentielle de renseignements aux fins de l'analyse et complète donc la série de produits analytiques de Statistique Canada, intitulée *Le Canada à l'étude*. Ces trois séries constituent dans leur ensemble une source complète de données et de renseignements sur les tendances démographiques observées au Canada.

La présente série a été élaborée avec l'aide et la coopération de nos utilisateurs de données. J'aimerais exprimer ma gratitude à ceux qui ont accepté de participer de bonne grâce à notre programme de consultation auprès des utilisateurs. Leur contribution nous a permis d'élaborer des produits et services qui, nous l'espérons, se révéleront d'intérêt considérable pour de nombreux Canadiens.

Le statisticien en chef du Canada Ivan P. Fellegi

Highlights

- In 1991, 73% of the population (19.7 million people) had English as first official language spoken, 25% (6.7 million) had French as first official language spoken, 1% had English and French, and the remaining 1% spoke neither English nor French.
- Nationally, and in the Ottawa-Hull census metropolitan area, French is defined as the minority official language.
 The official language minority is defined as English in Quebec and French in the other provinces and territories.
- In provinces where French was the official language minority, the percentage in this group was highest in New Brunswick (33.9% or 243,000 people) and Ontario (5.1% or 510,000 people) and lowest in British Columbia (1.5% or 49,545 people) and Newfoundland (0.5% or 2,675 people).
- In Quebec, the English official language minority made up 13.3% of the population (904,000 people).
- Five of the 25 census metropolitan areas had a minority official language population which included more than 5% of the area's inhabitants.
- In the Ottawa-Hull census metropolitan area, 35.3% of the inhabitants were in the French official language minority.
- In the other census metropolitan areas, the percentage in the official language minority ranged from 29.1% in Sudbury (23.3% in Montreal) to less than 1% in St. John's.
- Nationally, among Canadians with a non-official language as mother tongue, 7% were classified as part of the French official language minority.
- In Quebec, 48% of those with a non-official language as mother tongue were classified as part of the English minority.
- Nationally, those in the French official language minority formed a greater percentage of the population in older age groups. The percentage was highest for the 45-49 age group (28%) and the 50-54 age group (27%) and lowest for the 0-4 age group (22%), followed by the 5-9 age group (23%).

Faits saillants

- En 1991, 73 % de la population (19,7 millions) avait l'anglais comme première langue officielle parlée, 25 % (6,7 millions) avait le français, 1 % avait l'anglais et le français, alors que le reste de la population (soit 1 %) ne parlait ni l'anglais ni le français.
- Dans l'ensemble du pays, ainsi que dans la région métropolitaine de recensement d'Ottawa-Hull, la langue officielle de la minorité est le français. La minorité de langue officielle est de langue anglaise au Québec et de langue française dans les autres provinces et territoires.
- Parmi les provinces où la minorité de langue officielle était de langue française, le Nouveau-Brunswick (33,9 % ou 243 000 personnes), et l'Ontario (5,1 % ou 510 000 personnes) avaient les proportions les plus élevées de personnes appartenant à la minorité, alors que la Colombie-Britannique (1,5 % ou 49 545 personnes) et Terre-Neuve (0,5 % ou 2 675 personnes) avaient les plus faibles proportions.
- Au Québec, la minorité anglaise représentait 13,3 % de la population (904 000 personnes).
- Parmi les 25 régions métropolitaines de recensement, cinq régions avaient une minorité de langue officielle représentant plus de 5 % de leur population.
- Dans la région métropolitaine de recensement d'Ottawa-Hull, la minorité française représentait 35,3 % de la population.
- Dans les autres régions métropolitaines de recensement, la proportion de la minorité de langue officielle variait entre 29,1 % à Sudbury (23,3 % à Montréal) et moins de 1 % à St. John's.
- Dans l'ensemble du pays, parmi les Canadiens qui avaient indiqué une langue non officielle comme langue maternelle, 7 % faisaient partie de la minorité française.
- Au Québec, 48 % des Canadiens qui avaient indiqué une langue non officielle comme langue maternelle faisaient partie de la minorité anglaise.
- Dans l'ensemble du pays, les personnes appartenant à la minorité de langue officielle française représentaient une proportion plus importante de la population dans les groupes d'âge avancés. Ainsi, parmi les personnes appartenant aux groupes d'âge 45-49 ans (28 %) et 50-54 ans (27 %), on trouvait les plus fortes proportions de Canadiens faisant partie de la minorité française, alors que les proportions étaient les plus faibles chez les groupes d'âge 0-4 ans (22 %) et 5-9 ans (23 %).

- The English minority in Quebec formed a smaller percentage of the population in the youngest age groups (under 15 years of age). Similarly, the French minority in Ontario made up a smaller percentage of the groups under 15 years of age.
- The French official language minority made up 25% of the labour force but accounted for 29% of the unemployed population in Canada.
- The largest difference in unemployment was found in New Brunswick, where 19% of those in the French official language minority were unemployed, compared to 14% for the rest of the population.
- La minorité anglaise au Québec ainsi que la minorité française en Ontario représentaient une plus faible proportion de la population chez les jeunes âgés de moins de 15 ans.
- La minorité de la langue officielle française représentait
 25 % de la population active et 29 % des chômeurs dans l'ensemble du pays.
- Au Nouveau-Brunswick, 19 % de la minorité française était en chômage, comparativement à 14 % dans le reste de la population, soit l'écart le plus important parmi les provinces.

Introduction

This publication provides estimates of first official language spoken from the 1991 Census of Canada. First official language spoken is derived from information on knowledge of official languages, mother tongue and home language (see definitions). Data are shown for Canada, provinces and territories, census metropolitan areas, census divisions and census subdivisions.

Organization of the Publication

This publication consists of six tables. Each table shows the count of those with English as first official language spoken. those with French, with English and French, and with Neither English nor French. The count and percentage of those who comprise the official language minority are also shown.

Tables 1, 3 and 4 show the above information for various geographical areas. Table 2 shows first official language spoken by mother tongue. Table 5 shows first official language spoken by age and sex, while Table 6 shows the same variable by labour force activity and sex.

Table Descriptions

Table 1 shows the estimates of first official language spoken as well as the number and percentage of the population who comprise the official language minority for Canada, provinces, territories and census metropolitan areas.

Table 2 shows the estimates of first official language spoken as well as the number and percentage of the population who comprise the official language minority by mother tongue for Canada, provinces and territories.

Table 3 shows the estimates of first official language spoken as well as the number and percentage of the population who comprise the official language minority for census metropolitan areas and census subdivisions within them.

Table 4 shows the estimates of first official language spoken as well as the number and percentage of the population who comprise the official language minority for census divisions and subdivisions, as well as for Canada, provinces and territories.

Introduction -

La présente publication fournit des estimations relatives à la première langue officielle parlée, établies d'après les données du recensement du Canada de 1991. estimations sont produites à partir des renseignements sur la connaissance des langues officielles, la langue maternelle et la langue parlée à la maison (voir les définitions). Les données sont présentées pour le Canada, les provinces, les territoires, les régions métropolitaines de recensement, les divisions de recensement et les subdivisions de recensement.

Structure de la publication

La présente publication comporte six tableaux. Chaque tableau indique le nombre de personnes dont la première langue officielle parlée est soit l'anglais, soit le français, soit l'anglais et le français ou ni l'anglais ni le français. Le nombre et le pourcentage de personnes qui constituent la minorité de langue officielle sont également présentés.

Les tableaux 1, 3 et 4 fournissent les renseignements susmentionnés pour différentes régions géographiques. Le tableau 2 porte sur la première langue officielle parlée selon la langue maternelle. Le tableau 5 a trait à la première langue officielle parlée selon l'âge et le sexe, alors que le tableau 6 présente cette même variable selon l'activité et le sexe.

Description des tableaux

Le tableau 1 fournit les estimations relatives à la première langue officielle parlée ainsi que le nombre et le pourcentage de personnes qui constituent la minorité de langue officielle pour le Canada, les provinces, les territoires et les régions métropolitaines de recensement.

Le tableau 2 présente les estimations relatives à la première langue officielle parlée ainsi que le nombre et le pourcentage de personnes qui constituent la minorité de langue officielle selon la langue maternelle pour le Canada, les provinces et les territoires.

Le tableau 3 présente les estimations relatives à la première langue officielle parlée ainsi que le nombre et le pourcentage de personnes qui constituent la minorité de langue officielle pour les régions métropolitaines de recensement et les subdivisions de recensement qui les composent.

Le tableau 4 fournit les estimations relatives à la première langue officielle parlée ainsi que le nombre et le pourcentage de personnes qui constituent la minorité de langue officielle pour les divisions de recensement, les subdivisions de recensement, le Canada, les provinces et les territoires.

Table 5 shows the estimates of first official language spoken as well as the number and percentage of the population who comprise the official language minority by age group and sex for Canada, provinces and territories.

Table 6 shows the estimates of first official language spoken as well as the number and percentage of the population who comprise the official language minority by labour force activity and sex for Canada, provinces and territories.

Content Considerations

Counts of the population, households, dwellings or families shown in tabulations based on a 20% sample may differ from those collected on a 100% basis for the following reasons:

- (1) The exclusion of institutional residents: Institutional residents are defined as those individuals other than staff members and their families who live in institutional collective dwellings such as residences for senior citizens, hospitals, correctional and penal institutions. Detailed sample data were not collected from this sector of the population.
- (2) Weighting: Data collected on a sample basis were weighted up to provide estimates of the entire population excluding institutional residents. However, weighted counts are subject to sampling variability. This means, for any given area, the weighted count may differ from that shown in tabulations containing data collected on a 100% basis. While the differences are relatively small for geographic areas with large populations, they can be greater for areas with small populations. For further information on this topic, please contact Social Survey Methods Division at Statistics Canada, Ottawa, Canada K1A 0T6 (613) 951-6940.

Le **tableau 5** présente les estimations relatives à la première langue officielle parlée ainsi que le nombre et le pourcentage de personnes qui constituent la minorité de langue officielle selon le groupe d'âge et le sexe pour le Canada, les provinces et les territoires.

Le **tableau 6** fournit les estimations relatives à la première langue officielle parlée ainsi que le nombre et le pourcentage de personnes qui constituent la minorité de langue officielle selon l'activité et le sexe pour le Canada, les provinces et les territoires.

Considérations relatives au contenu

Les chiffres de la population, des ménages, des logements ou des familles dans les totalisations utilisant les données-échantillon (20 %) peuvent différer des données intégrales pour les raisons suivantes :

- (1) L'exclusion des pensionnaires d'un établissement institutionnel : Ces derniers sont définis comme les personnes autres que les membres du personnel et leur famille qui vivent dans des logements collectifs institutionnels tels que les foyers pour personnes âgées, les hôpitaux, les établissements de correction et établissements pénitentiaires. On n'a pas recueilli de données-échantillon détaillées pour ce secteur de la population.
- (2) Pondération: Les données-échantillon sont pondérées afin d'obtenir des estimations de la population tout entière à l'exclusion des pensionnaires d'un établissement Cependant, les chiffres pondérés se institutionnel. caractérisent par la variabilité d'échantillonnage, ce qui signifie que pour toute région donnée, le chiffre pondéré peut différer de celui qui figure dans les totalisations contenant les données intégrales. Bien que les différences soient relativement faibles pour les régions géographiques ayant de fortes populations, elles peuvent être plus importantes dans le cas des régions avec de petites populations. Pour de plus amples renseignements sur ce sujet, veuillez communiquer avec la Division des méthodes d'enquêtes sociales de Statistique Canada, Ottawa, Canada K1A 0T6 (613)951-6940.

Users should also be aware that differences in counts may be due to the different subpopulations or universes for which the data are reported. For example, mobility data are reported for persons 5 years and over for the 5 year interval data and 1 year and over for the 1 year interval data, excluding those temporarily residing overseas; education and labour force data are reported for persons 15 years and over. Furthermore, data may be produced for subsets of these education and labour universes such as total labour force, employed labour force, etc. Similar differences may occur in tabulations for households, dwellings or families. The 1991 Census Dictionary (Catalogue No. 92-301E) provides more detailed information on universes or subpopulations by variable.

Some Indian reserves and Indian settlements were incompletely enumerated during the 1986 and/or 1991 Censuses (see "Special Notes"). These reserves and settlements are identified in Appendix 1.

Comparison of the 1991 Census data with data from earlier censuses is affected by a change in the definition of the 1991 Census population. Persons in Canada on student authorizations, employment authorizations, Minister's permits, and as refugee claimants were enumerated in the 1991 Census but not in previous censuses. These persons are referred to as non-permanent residents. For further information, see the "Special Notes" section.

First Official Language Spoken

The definitions of **first official language spoken** and **official language minority** are outlined in the Official Languages (Communications with and Services to the Public) Regulations issued pursuant to the Official Languages Act (1988).

Les utilisateurs doivent également noter que les différences de chiffres peuvent s'expliquer par les différentes sous-populations ou univers pour lesquels les données sont publiées. Ainsi, les données sur la mobilité (période de cinq ans) sont déclarées pour les personnes âgées de cinq ans et plus et les données sur la mobilité (période de un an) sont déclarées pour les personnes âgées de un an et plus, excluant celles qui résident temporairement outre-mer; les données sur la scolarité et la population active ne sont déclarées que pour les personnes âgées de 15 ans et plus. De plus, des données peuvent être produites pour les sous-ensembles de ces univers de la scolarité et du travail tels que la population active totale, la population active occupée, etc. Des différences similaires peuvent se glisser dans les totalisations pour les ménages, les logements ou les familles. Le Dictionnaire du recensement de 1991 (nº 92-301F au catalogue) contient plus de renseignements détaillés sur les univers ou les sous-populations par variable.

Certaines réserves indiennes et établissements indiens n'ont été que partiellement dénombrés lors des recensements de 1986 et/ou de 1991 (voir «Notes spéciales»). Ces réserves et ces établissements sont indiqués à l'annexe 1.

La comparaison des données du recensement de 1991 avec celles des recensements précédents est affectée par la modification apportée à la définition de la population du recensement de 1991. Les titulaires d'un permis de séjour pour étudiants, d'un permis de travail, d'un permis ministériel et les revendicateurs du statut de réfugié ont été dénombrés au recensement de 1991, mais ne l'ont pas été aux recensements antérieurs. Ces personnes sont des résidents non permanents. Pour plus de renseignements, voir la section «Notes spéciales».

Première langue officielle parlée

Les définitions de la première langue officielle parlée et de la minorité de langue officielle se trouvent dans le Règlement sur les langues officielles – Communications avec le public et prestation des services, publié conformément à la Loi sur les langues officielles (1988).

Information on first official language spoken is not collected directly from respondents. Rather, it is derived from three language variables on the census questionnaire – knowledge of official languages, mother tongue and home language. The first step in the derivation of this variable is to examine the respondent's knowledge of English and French. A person who speaks only English has English assigned as the first official language while a person who speaks only French has French assigned. If the person can speak both English and French, then the mother tongue is examined. If the mother tongue is English, then English is the first official language spoken. The same procedure is used for French. Thus, a person who speaks English and French, and has French as mother tongue, would have French assigned as the first official language spoken.

If the respondent speaks both English and French and indicates English and French as mother tongue, then the home language variable is examined to assign the first official language spoken. In this circumstance, a home language of English would result in English being assigned as first official language spoken, while a home language of French would see French assigned as first official language spoken. Consequently, a person who speaks both English and French, has both official languages as mother tongue and English as home language would have English assigned as first official language spoken.

Situations where the respondents can speak English and French and have both languages as mother tongue and home language are assigned English and French as first offficial language spoken.

The official language minority is English in Quebec and French in all other provinces and territories. The size of the official language minority is determined by adding the minority population and half of the "English and French" population. For example, in Ontario, the official language minority is the sum of those who have French as their first official language spoken and half of those who have English and French as first official language spoken.

For a more complete explanation, see the definitions which appear on page 239 in this publication.

Les informations sur la première langue officielle parlée ne sont pas recueillies directement auprès des répondants. Elles sont plutôt dérivées de trois variables linguistiques du questionnaire du recensement : la connaissance des langues officielles, la langue maternelle et la langue parlée à la maison. La première étape dans la dérivation de la variable consiste à examiner les réponses à la question sur la connaissance de l'anglais et du français. Une personne unilingue anglaise se voit assigner l'anglais comme première langue officielle parlée, alors que le français est assigné a une personne unilingue française. Si la personne parle l'anglais et le français, on examine alors sa langue maternelle. Si celle-ci est l'anglais, l'anglais sera donc considéré comme sa première langue officielle parlée. La même méthode est utilisée pour le français. Par conséquent, lorsqu'une personne peut parler anglais et français et a le français comme langue maternelle, le français est assigné comme première langue officielle parlée.

Lorsqu'un répondant parle l'anglais et le français et indique ces deux langues à la question sur la langue maternelle, on examinera alors la variable «langue parlée à la maison» afin de déterminer la première langue officielle parlée. Dans ce cas, si l'anglais est la langue parlée à la maison, l'anglais sera assigné comme première langue officielle parlée; si le français est la langue parlée à la maison, le français sera assigné comme première langue officielle parlée. Par conséquent, une personne qui parle l'anglais et le français, qui indique les deux langues officielles comme langue maternelle et qui parle anglais à la maison aura donc l'anglais comme première langue officielle parlée.

Dans les cas où le répondant parle l'anglais et le français et indique les deux langues officielles comme langue maternelle et langue parlée à la maison, l'anglais et le français seront assignés comme première langue officielle parlée.

La minorité de langue officielle est de langue anglaise au Québec et de langue française dans les autres provinces et territoires. La taille de la minorité de langue officielle est estimée en additionnant la population minoritaire et la moitié de la population ayant l'anglais et le français comme première langue officielle parlée. En Ontario, par exemple, la minorité de langue officielle est calculée en additionnant la population ayant le français comme première langue officielle parlée et la moitié de la population ayant l'anglais et le français comme première langue officielle parlée.

Pour de plus amples renseignements, voir les définitions à la page 253 de cette publication.

The calculation of the size of the official language minority is carried out using unrounded data. Consequently, the total is not necessarily the same as that which would be derived directly from the rounded figures in the table. For example, there could be 100 persons with French as first official language spoken, another 50 with both English and French, and 130 in the French official language minority (the latter figure would be 125 if we added those with French as first official language spoken and half of those with English and French).

Census Subdivision Data

Tables 3 and 4 of this publication present data for census subdivisions. It should be noted that some census subdivisions are not included either because of their size or because of incomplete enumeration. Census subdivisions with less than 40 inhabitants are not included in this publication. Incompletely enumerated Indian reserves and settlements are also excluded. Such census subdivisions appear in the geographic index, but not in the tables.

Users are also cautioned to consider the sampling variability when using data for small areas (see Data Quality note at the back of this publication). The data are based on a sample of one in five households in most cases and are weighted with respect to the total population (excluding institutional residents).

The figures used in this publication have been randomly rounded to ensure confidentiality. While this has little impact on the calculation of the official language minority for larger areas, the effect on small geographic areas is more significant. Figures below 10 are rounded to 0 or 10, while figures higher than 10 are rounded so that the last digit is either 0 or 5.

Additional information on content considerations, definitions of terms, explanations of data quality, etc., may also be found at the end of this publication, immediately following the data tables. (This information is presented separately in English and in French sections for easier use.)

La taille de la minorité de langue officielle est calculée en utilisant les données non arrondies. Comme les totaux sont arrondis séparément, ils ne correspondent pas nécessairement à la somme des chiffres arrondis séparément qui apparaissent dans les tableaux. Par exemple, il pourrait y avoir 100 personnes ayant le français comme première langue officielle parlée, 50 autres personnes ayant l'anglais et le français, et 130 personnes appartenant à la minorité de langue officielle française. Si l'on additionnait les 100 personnes ayant le français comme première langue officielle parlée et la moitié des 50 personnes ayant l'anglais et le français, le total serait de 125 et non de 130.

Données des subdivisions de recensement

Les tableaux 3 et 4 de cette publication présentent les données pour les subdivisions de recensement. Il est à noter que certaines subdivisions de recensement n'apparaissent pas dans les tableaux en raison de la faible taille de leur population ou de leur dénombrement partiel. Les subdivisions de recensement ayant moins de 40 habitants ne sont pas incluses dans cette publication. Les réserves indiennes et les établissements indiens partiellement dénombrés sont aussi exclus. Ces subdivisions de recensement apparaissent dans l'index géographique mais sont exclues des tableaux.

Les utilisateurs devraient également être informés du fait que l'erreur susceptible d'être introduite par l'échantillonnage sera plus importante lorsque l'on utilise des données pour les régions ayant de petites populations (voir la section sur la qualité des données à la fin de la publication). Les données sont basées sur un échantillon de un ménage sur cinq dans la plupart des cas et sont pondérées afin d'obtenir des estimations de la population tout entière à l'exclusion des pensionnaires d'un établissement institutionnel.

Les données utilisées dans cette publication ont fait l'objet d'un arrondissement aléatoire afin d'assurer la confidentialité. Même s'il n'y a pratiquement pas d'impact lors du calcul de la minorité de langue officielle, les effets sur les régions ayant de petites populations sont plus significatifs. Les données inférieures à 10 sont arrondies à 0 ou 10 alors que celles supérieures à 10 sont arrondies de façon à ce que le dernier chiffre soit un 0 ou un 5.

Vous trouverez également à la fin de la présente publication, immédiatement après les tableaux de données, d'autres informations sur les considérations relatives au contenu, à la définition de termes, à la qualité des données, etc. (Ces informations sont présentées séparément en français et en anglais pour en faciliter l'usage.)

Symbols

The following standard symbols may be found in Census products.

- .. Figures not available.
- ... Figures not appropriate or not applicable.
- Nil or zero.
- Amount too small to be expressed.

XXX Figures suppressed to protect confidentiality.

- ** The median could not be calculated as it occurred in an open-ended class.
- Land area is included in neighbouring census subdivision.
- An error exists in the 1991 counts for this census subdivision (CSD). For further information, see the "Special Notes" section.
- A Adjusted figure due to boundary change.
- † Excludes Census data for one or more incompletely enumerated Indian reserves or Indian settlements. For further information, see the "Special Notes" section.
- ¶ Incompletely enumerated Indian reserve or Indian settlement. For further information, see the "Special Notes" section.
- Data quality index showing a global non-response rate higher than or equal to 5% and lower than 25%. For further information, see the "Special Notes" section.
- Data quality index showing a global non-response rate higher than or equal to 25%. For further information, see the "Special Notes" section.
- Data quality index showing a global non-response rate for the housing questions which is higher than or equal to 25%. For further information, see the "Special Notes" section.

Signes conventionnels

Les signes conventionnels suivants peuvent être retrouvés dans les produits du recensement.

- .. Nombres non disponibles.
- ... N'ayant pas lieu de figurer.
- Néant ou zéro.
- Nombres infimes.

XXX Nombres supprimés afin de protéger la confidentialité.

- ** Il est impossible de calculer la médiane car elle se trouve dans une des classes ouvertes de répartition utilisée pour calculer la médiane.
- La superficie est comprise dans la subdivision de recensement avoisinante.
- Une erreur a été relevée dans les chiffres de 1991 pour cette subdivision de recensement (SDR). Pour plus de renseignements, voir la section «Notes spéciales».
- A Chiffre ajusté à cause de changement de limite.
- † Ne comprend pas les données du recensement pour une ou plusieurs réserves indiennes ou établissements indiens partiellement dénombrés. Pour plus de renseignements, voir la section «Notes spéciales».
- ¶ Réserve indienne ou établissement indien partiellement dénombré. Pour plus de renseignements, voir la section «Notes spéciales».
- Indice de qualité des données indiquant un taux global de non-réponse supérieur ou égal à 5 % mais inférieur à 25 %. Pour plus de renseignements, voir la section «Notes spéciales».
- Indice de qualité des données indiquant un taux global de non-réponse supérieur ou égal à 25 %. Pour plus de renseignements, voir la section «Notes spéciales».
- Indice de qualité des données indiquant un taux global de non-réponse aux questions sur le logement qui est supérieur ou égal à 25 %. Pour plus de renseignements, voir la section «Notes spéciales».

Definitions

The definitions of geographic terms and census concepts are presented here in summary form only. Users should refer to the 1991 Census Dictionary (Catalogue No. 92-301E) for the full definitions and additional remarks related to these concepts and definitions.

Age

Refers to the age at last birthday (as of the census reference date, June 4, 1991). This variable is derived from the date of birth question which asks day, month and year of birth. Persons who were unable to give the exact date of birth were asked to give the best possible estimate.

Census Division (CD)

Refers to the general term applying to geographic areas established by provincial law, which are intermediate geographic areas between the census subdivision and the province (e.g., divisions, counties, regional districts, regional municipalities and seven other types of geographic areas made up of groups of census subdivisions).

In Newfoundland, Manitoba, Saskatchewan and Alberta, provincial law does not provide for these administrative geographic areas. Therefore, census divisions have been created by Statistics Canada in co-operation with these provinces.

Census Metropolitan Area (CMA)

The general concept of a census metropolitan area (CMA) is one of a very large urban area, together with adjacent urban and rural areas which have a high degree of economic and social integration with that urban area.

A CMA is delineated around an urban area (called the urbanized core and having a population of at least 100,000, based on the previous census). Once an area becomes a CMA, it is retained in the program even if its population subsequently declines.

Smaller urban areas, centred on urbanized cores of a population of at least 10,000, are included in the census agglomeration (CA) program.

Census Subdivision (CSD)

Refers to the general term applying to municipalities (as determined by provincial legislation) or their equivalent, e.g., Indian reserves, Indian settlements and unorganized territories.

In Newfoundland, Nova Scotia and British Columbia, the term also describes geographic areas that have been created by Statistics Canada in co-operation with the provinces as equivalents for municipalities.

Experienced Labour Force

Refers to persons who, during the week prior to June 4, 1991, were employed or unemployed but who had worked since January 1, 1990. The experienced labour force can be derived by deleting from the total labour force those unemployed persons 15 years of age and over who have never worked or who worked only prior to January 1, 1990.

First Official Language Spoken

Refers to a variable specified within the framework of the implementation of the Official Languages Act.

The derivation method is described in regulations respecting the use of official languages for the provision of public services. It takes into account, first, the knowledge of the two official languages; second, the mother tongue; and third, the home language.

People who can conduct a conversation in French only are assigned French as their first official language spoken. People who can carry on a conversation in English only are assigned English as their first official language spoken. The responses to questions on mother tongue and home language are subsequently used to establish the first official language spoken by people who can speak both English and French, or who cannot speak either of the two official languages. The French category includes people who speak French only, or French and at least one non-official language as their mother tongue. People who speak English only or English and at least one non-official language as their mother tongue are included in the English category.

For cases that have not yet been classified, people are assigned to the French category when they speak French only or French and at least one non-official language as their home language. The procedure is the same for English. Thus, the population is classified into two principal categories: English or French. It is necessary to add two residual categories for people who cannot be classified in accordance with the information available: (a) English and French; and (b) neither English nor French.

Inexperienced Labour Force

The inexperienced labour force consists of unemployed persons 15 years of age and over who have never worked or who worked only prior to January 1, 1990.

Labour Force Activity

Refers to the labour market activity of the working age population who, in the week prior to June 4, 1991, were employed or unemployed. The remainder of the working age population is classified as not in labour force. Data are available for persons 15 years of age and over, excluding institutional residents.

Mother Tongue

Refers to the first language learned at home in childhood and still understood by the individual at the time of the census.

The following instructions were provided to respondents in the 1991 Census Guide:

Report the first language learned at home before starting school. If this language is no longer understood, report the second language learned.

If more than one language is understood, report the language first learned at home. If two languages were learned at the same time, report the language spoken most often as a child at home. If both languages were used equally often, report both.

For a child who has not yet learned a language, report the first language this child will learn **at home**. If two languages will be learned at the same time, report the one which will be used most often to speak to this child. If both languages are used **equally often**, report **both**.

If a person speaks an **Indian** language (from **India**), do not report Indian but rather the specific language such as Hindi, Urdu or Punjabi.

If a person speaks an **Amerindian** (North American Indian) language, report the specific Amerindian language such as Cree or Ojibway.

Official Language Minority

The official language minority is English in Quebec and French in all other provinces and territories. The size of the official language minority is determined in Quebec by adding those who have English as first official language spoken with half of those who have English and French as first official language spoken. Outside Quebec, the official language minority comprises those with French as first official language spoken and half of those with English and French as first official language spoken.

Province

Refers to the major political division of Canada. From a statistical point of view, it is a basic unit for which data are tabulated and cross-classified.

Sex

Refers to the gender of the respondent.

Territory

Refers to two major political divisions of Canada, namely Yukon and Northwest Territories. From a statistical point of view, these territories are equivalent to provinces, i.e. a basic unit for which data are tabulated and cross-classified.

Data Quality

General

The 1991 Census was a large and complex undertaking and, while considerable effort was taken to ensure high standards throughout all collection and processing operations, the resulting estimates are inevitably subject to a certain degree of error. Users of census data should be aware such error exists, and have some appreciation of its main components, so that they can assess the usefulness of census data for their purposes and the risks involved in basing conclusions or decisions on these data.

Errors can arise at virtually every stage of the census process from the preparation of materials, through the listing of dwellings and data collection to processing. Some errors occur more or less at random, and when the individual responses are aggregated for a sufficiently large group, such errors tend to cancel out. For errors of this nature, the larger the group, the more accurate the corresponding estimate. It is for this reason that users are advised to be cautious when using small estimates. There are some errors, however, which might occur more systematically, and which result in "biased" estimates. Because the bias from such errors is persistent no matter how large the group for which responses are aggregated, and because bias is particularly difficult to measure, systematic errors are a more serious problem for most data users than the random errors referred to previously.

For census data in general, the principal types of error are as follows:

- coverage errors, which occur when dwellings and/or individuals are missed, incorrectly included or double counted;
- non-response errors, which result when responses cannot be obtained from a small number of households and/or individuals, because of extended absence or some other reason;
- response errors, which occur when the respondent, or sometimes the Census Representative, misunderstands a census question, and records an incorrect response;
- processing errors, which can occur at various steps including: coding, when "write-in" responses are transformed into numerical codes; data capture, when responses are transferred from the census questionnaire to computer tapes by key-entry operators; and imputation when a "valid", but not necessarily correct, response is inserted into a record by the computer to replace missing or "invalid" data ("valid" and "invalid" referring to whether or not the response is consistent with other information on the record);
- sampling errors, which apply only to the supplementary questions on the "long form" asked of a one-fifth sample of households, and which arise from the fact that the results for these questions, when weighted up to represent the whole population, inevitably differ somewhat from the results which would have been obtained if these questions had been asked of all households.

The above types of error each have both random and systematic components. Usually, however, the systematic component of sampling error is very small in relation to its random component. For the other non-sampling errors, both random and systematic components may be significant.

Coverage Errors

Coverage errors affect the accuracy of the census counts, that is the sizes of the various census universes: population, families, households and dwellings. While steps have been taken to correct certain identifiable errors, the final counts are still subject to some degree of error resulting from persons or dwellings being missed, incorrectly included in the census or double counted.

Missed dwellings or persons result in **undercoverage**. Dwellings can be missed because of misunderstanding of enumeration area (EA) boundaries, or because dwellings are hidden or appear uninhabitable. Persons can be missed when their dwelling is missed or classified as vacant, or when individual household members are omitted from the questionnaire because the respondent misinterprets the instructions on whom to include. Some individuals may be missed because they have no usual residence and did not spend census night in any dwelling.

Dwellings or persons that are incorrectly included or double counted result in **overcoverage**. Overcoverage of dwellings can occur when structures unfit for habitation are listed as dwellings, or when units which do not meet the census definition of a dwelling are listed separately instead of being treated as part of a larger dwelling. Double counting of dwellings can occur, for example, because of ambiguity over EA boundaries. Persons can be double counted because their dwelling is double counted or because the guidelines on whom to include on the questionnaire have been misunderstood. Occasionally, someone who is not in the census population universe, such as a foreign resident or a fictitious person, may, incorrectly, be enumerated in the census. On average, overcoverage is less likely to occur than undercoverage and, as a result, counts of dwellings and persons are likely to be slightly underestimated.

In 1991, four studies were undertaken to measure different aspects of coverage error. First, a sample of dwellings listed as vacant was revisited to verify that they really were vacant on Census Day. Adjustments have been made to the final census counts for households and persons missed because their dwelling was incorrectly classified as vacant. Second, a sample of persons enumerated as temporary residents was selected to verify whether or not they were enumerated at their usual place of residence. Based on this sample, estimates were obtained of the number of persons missed because they were temporarily absent from their usual place of residence. Corresponding adjustments were made to the final population counts. Despite these adjustments, the final counts are still subject to some undercoverage. For Canada as a whole and for each province and territory, the magnitude of this residual undercoverage in the 1991 Census is being measured by means of a special study known as the Reverse Record Check. Undercoverage tends to be higher for certain segments of the population such as young adult males and recent immigrants. The fourth study, known as the Overcoverage Study, is designed to investigate overcoverage errors. The results of the Reverse Record Check and the Overcoverage Study, when taken together, furnish an estimate of net undercoverage.

Other Non-Sampling Errors

While coverage errors affect the number of units in the various census universes, other errors affect the characteristics of those units.

Sometimes, it is not possible to obtain a complete response from a household, even though the dwelling was identified as occupied and a questionnaire dropped off. The household members may have been away throughout the census period or, in rare instances, the householder may have refused to complete the form. More frequently, the questionnaire is returned but

information is missing for some questions or individuals. Considerable effort is devoted to ensure as complete a response as possible. Census representatives edit the questionnaires and follow up on missing information. The Census Representative's work is then checked by both a supervisor and a quality control technician. Despite this, at the end of the collection stage, a small number of responses is still missing. Although missing entries are eliminated during processing by replacing a missing value by the corresponding entry for a "similar" record, there remain some potential non-response errors. This is particularly serious if the non-respondents differ in some respects from the respondents, since this procedure will result in non-response bias.

Even when a response is obtained, it may not be entirely accurate. The respondent may have misinterpreted the question or may have guessed the answer, especially when answering on behalf of another, possibly absent, household member. Such errors are referred to as **response errors**. While response errors usually arise from inaccurate information provided by respondents, they can also result from mistakes by the Census Representative when completing certain parts of the questionnaire, such as structural type of dwelling, or when calling back to obtain a missing response.

Some of the questions on the census document require a written response. During processing, these "write-in" entries are given a numeric code. **Coding errors** can occur, especially when the code list is extensive (as with, for example, language, ethnic origin, industry and occupation), and when the written response is ambiguous, incomplete or difficult to read. Coding errors are controlled, though not completely eliminated, by verifying a sample of the codes and taking corrective action where necessary. For the first time in 1991, much of the coding was automated, partly in an effort to reduce the extent of coding errors.

The information on the questionnaires is key-entered onto a computer file. Two procedures are used to control the number of data capture errors. First, certain edits (such as range checks) are performed as the data are keyed. Second, a sample from each batch of documents is re-keyed and compared with the original entries. If there is more than a specified number of errors among the original entries, the whole batch is re-keyed.

Once the data have been captured, they are sent to Ottawa where they undergo a series of computer checks to identify missing or inconsistent responses. In the case of inconsistent responses, it has first to be decided which response is to be considered invalid. Invalid or missing responses must then be replaced by valid responses, that is, responses which are consistent with other data on the record. For a small proportion of cases, the correct response can be inferred from other data on the record. In most cases, however, this is not possible and a valid response is obtained from a "donor" record selected at random from among a group of consistent records which are similar to the invalid record in terms of a number of related characteristics. There is, of course, no guarantee that the imputed value will necessarily be the correct response for the individual concerned. However, provided the missing or invalid records are similar, on average, to the valid records, any imputation errors will more or less cancel out when results are tabulated for a sufficiently large geographic area or population subgroup.

Various studies are being carried out to evaluate the quality of the responses obtained in the 1991 Census. For each question, response rates and edit failure rates have been calculated. These can be useful in identifying the potential for non-response and other errors. Also, tabulations from the 1991 Census have been or will be compared with corresponding estimates from previous censuses, from sample surveys (such as the Labour Force Survey) and from various administrative records (such as birth registrations and municipal assessment records). Such comparisons can indicate potential quality problems or at least discrepancies between the sources.

In addition to these aggregate-level comparisons, there are some micromatch studies in progress, in which census responses are compared with another source of information at the individual record level. For certain "stable" characteristics (such as age, sex, mother tongue, place of birth), the responses obtained in the 1991 Census, for a sample of individuals, are being compared with those for the same individuals in the 1986 Census. Also, following the 1991 Census, a sample of persons was re-enumerated, primarily to determine overcoverage rates. At the same time, however, interviewers asked a series of detailed questions on language, ethnic origin and marital status; the responses will be compared with the corresponding census responses in order to identify, and hopefully understand, response errors.

Sampling Errors

Estimates obtained by weighting up responses collected on a sample basis are subject to error due to the fact that the distribution of characteristics within the sample will not usually be identical to the distribution of characteristics within the population from which the sample has been selected.

The potential error introduced by sampling will vary according to the relative scarcity of the characteristics in the population. For large cell values, the potential error due to sampling, as a proportion of the cell value, will be relatively small. For small cell values, this potential error, as a proportion of the cell value, will be relatively large.

The potential error due to sampling is usually expressed in terms of the so-called "standard error". This is the square root of the average, taken over all possible samples of the same size and design, of the squared deviation of the sample estimate from the value for the total population.

The table below provides approximate measures of the standard error due to sampling. These measures are intended as a general guide only.

Table: Approximate Standard Error Due to Sampling for 1991 Census Sample Data

Cell Value	Approximate Standard Error
50 or less	15
100	. 20
200	30
500	45

1,000	65	
2,000	90	
5,000	140	
10,000	200	
20,000	280	
50,000	450	
100,000	630	
500,000	1400	

Users wishing to determine the approximate error due to sampling for any given cell of data, based upon the 20% sample, should choose the standard error value corresponding to the cell value that is closest to the value of the given cell in the census tabulation. When using the obtained standard error value, in general the user can be reasonably certain that, for the enumerated population, the true value (discounting all forms of error other than sampling) lies within plus or minus three times the standard error (e.g., for a cell value of 1,000, the range would be $1,000 \pm 3 \times 65$ or $1,000 \pm 195$).

The standard errors given in the table above will not apply to population or universe (persons, households, dwellings or families) totals or subtotals for the geographic area under consideration (see Sampling and Weighting). The effect of sampling for these cells can be determined by comparison with a corresponding 100% publication.

The effect of the particular sample design and weighting procedure used in the 1991 Census will vary, however, from one characteristic to another and from one geographic area to another. The standard error values in the table may, therefore, understate or overstate the error due to sampling.

For further information on the quality of census data, contact the Social Survey Methods Division at Statistics Canada, Ottawa, Canada KIA 0T6 (613) 951-6940.

Confidentiality and Random Rounding

The figures shown in the tables have been subjected to a confidentiality procedure known as "random rounding". This is done to prevent the possibility of associating statistical data with any identifiable individual. Under this method, all figures including totals are randomly rounded either up or down to a multiple of "5", and in some cases "10". While providing strong protection against disclosure, this technique does not add significant error to the census data. However, there are some consequences for the users. Since totals are independently rounded, they do not necessarily equal the sum of individually rounded figures in distributions. Also, minor differences can be expected in corresponding totals and cell values in various census tabulations. Similarly, percentages, which are calculated on rounded figures, do not necessarily add up to 100. Percentage distributions and rates for the most part are based on rounded data, while percentage changes and averages are based on unrounded data. It should also be noted that small cell counts may suffer a significant distortion as a result of random rounding. Individual data cells containing small numbers may lose their precision as a result.

Users should be aware of possible data distortions when they are aggregating these rounded data. Imprecisions as a result of rounding tend to cancel each other out when data cells are reaggregated. However, users can minimize these distortions by using, whenever possible, the appropriate subtotals when aggregating.

For those requiring maximum precision, the option exists to use custom tabulations. With custom products, aggregation is done using individual census database records. Random rounding occurs only after the data cells have been aggregated, thus minimizing any distortion.

In addition to random rounding, area suppression has been adopted to further protect the confidentiality of individual responses.

Area suppression results in the deletion of all characteristic data for geographic areas with populations below a specified size. The extent to which data are suppressed depends upon the following factors:

- if the data are tabulated from the 100% database, suppression is based upon the total population;
- if the data are tabulated from the 20% sample database, suppression is based upon the non-institutional population;
- if the data contain an income distribution, those areas with populations below 250 persons are suppressed;
- if the data do not contain an income distribution, those areas with a population of less than 40 persons are suppressed.

In all cases, suppressed data are included in the appropriate higher aggregate subtotals and totals.

This technique is being implemented for all products involving subprovincial data (i.e. Profile series, basic summary tabulations, semi-custom and custom data products) collected on a 100% or 20% sample basis.

Sampling and Weighting

The 1991 Census data were collected either on a 100% basis (i.e. for all households) or on a sample basis (i.e. from only a random sample of households) with data weighted to provide estimates of the entire population. The information in this report was collected on a 20% sample basis and weighted up to compensate for sampling. All table headings are noted accordingly. Note that, on most Indian reserves and remote areas, all data were collected on a 100% basis.

For any given geographic area, the weighted population, household, dwelling or family total or subtotal may differ from that shown in reports containing data collected on a 100% basis. Such variation (in addition to the effect of random rounding) will be due to sampling.

Special Notes

Population Counts Based on Usual Residence

The population counts shown here for a particular area represent the number of Canadians whose usual place of residence is in that area, regardless of where they happened to be on Census Day. Also included are any Canadians staying in a dwelling in that area on Census Day and having no usual place of residence elsewhere in Canada, as well as those considered "non-permanent residents" (see note on this group). In most areas, there is little difference between the number of usual residents and the number of people staying in the area on Census Day. For certain places, however, such as tourist or vacation areas, or those including large work camps, the number of people staying in the area at any particular time could significantly exceed the number of usual residents shown here.

Incompletely Enumerated Indian Reserves and Indian Settlements

On some Indian reserves and Indian settlements in the 1991 Census, enumeration was not permitted or was interrupted before it could be completed. Moreover, some Indian reserves and Indian settlements were enumerated late or the quality of the collected data was considered inadequate. These geographic areas (a total of 78) are called incompletely enumerated Indian reserves and Indian settlements.

Data for 1991 are therefore not available for the incompletely enumerated reserves and settlements and are not included in tabulations. Data for geographic areas containing one or more of these reserves and settlements are therefore noted accordingly. Because of the missing data, users are cautioned that for the affected geographic areas, comparisons (e.g., percentage change) between 1986 and 1991 are not exact. While for higher level geographic areas (Canada, provinces, census metropolitan areas and census agglomerations) the impact of the missing data is very small, the impact can be significant for smaller areas, where the affected reserves and settlements account for a higher proportion of the population.

A list of incompletely enumerated Indian reserves and Indian settlements along with Population and Occupied Private Dwelling Counts from the last two censuses (where available) has been compiled and is shown in Appendix 1.

Non-permanent Residents

In 1991, for the first time, the census of population included both permanent and non-permanent residents of Canada. Non-permanent residents are persons who hold student or employment authorizations, Minister's permits or who are refugee claimants.

Prior to 1991, only permanent residents of Canada were included in the census. (The only exception to this was 1941.) Non-permanent residents were considered foreign residents and were not enumerated.

Today in Canada, non-permanent residents make up a growing segment of the population. Their presence can affect the demand for such government services as health care, schooling

and employment programs. The inclusion of non-permanent residents in the 1991 Census will also facilitate comparisons with provincial and territorial statistics (marriages, divorces, births and deaths) which include this population. In addition, the census definition is now closer to the United Nations' recommendation that long-term residents (persons living in a country for one year or longer) be enumerated.

Total population counts, as well as counts for all variables, will be affected by this change in the 1991 Census universe. According to the 1991 Census, there were 223,410 non-permanent residents in Canada, representing slightly less than 1% of the total population. Users should be especially careful when comparing data from 1991 and previous censuses in geographic areas where there is a concentration of non-permanent residents. These include the major metropolitan areas of Ontario, British Columbia and Quebec. The population distribution of non-permanent residents for the provinces, territories and census metropolitan areas is shown in Appendix 2.

Although every attempt was made to enumerate non-permanent residents, the completeness of enumeration of this population was below that achieved for permanent residents. Factors such as language difficulty and a reluctance to complete a government form or understand the need to participate, may have affected the enumeration of non-permanent residents and resulted in undercounting.

Data Quality Index For Census Subdivisions

In general, the census has been able to obtain accurate population and dwelling counts and to maintain high response rates to census questions for all geographic areas in Canada. However, some census subdivisions, mostly Indian reserves and Indian settlements, have very high non-response rates for some census questions despite the fact that accurate population and dwelling counts were obtained.

A data quality index based on two non-response rates is given for some census subdivisions (CSDs) to reflect this situation. The first non-response rate is a global rate equal to the percentage of required responses left unanswered by respondents. All published census questions exclusive to the long questionnaire were used in the calculation of this global rate (in the case of income only total income and wages and salaries were used). The magnitude of this global rate is indicated in tabulations as follows:

Less than 5%: no indication 5% to less than 25%: ◆ 25% or more: ◆◆

Tabulations for CSDs with a black diamond should be used with caution. Tabulations for CSDs with two black diamonds (a global non-response rate of 25% or more) are not released.

The second non-response rate is calculated in the same way as the global non-response rate except that it uses only the housing questions exclusive to the long questionnaire. This rate is calculated only for the released tabulations. The magnitude of this housing non-response rate is indicated in tabulations as follows:

Less than 25%: no indication

25% or more: ◊

Tabulations of housing questions with a white diamond are published but should be used with extreme caution due to the high non-response rates for these questions. It should be noted that in some cases both black and white diamonds may appear.

Because high non-response is a very localized phenomenon, data that are not released at the CSD levels are still included in tabulations at all higher geographic levels. These tabulations are not subject to any particular note.

Other Related Products

The 1991 Census product line is designed to serve the diverse needs of our users. A wide range of products and services are available from the 1991 Census of Population. They are organized into five categories:

- (1) Reference Products are designed to make census products and services easier to use by helping clients identify their needs and to find and interpret the data.
- (2) Data Products present a wide range of census data for standard geographical areas, covering social, cultural and economic characteristics of Canadians.
- (3) Analytical Products provide an interpretation of the 1991 Census data covering a variety of topics or themes, and present the findings in easy-to-read publications.
- (4) **Tabulation Services** provide tabulations aimed at meeting users' needs in a more detailed or specific form than is available in standard products.
- (5) Workshops and Seminars are offered to inform new and current data users about census data and to assist them in maximizing the value of census data to meet their needs.

To obtain more detailed information on the products and services available from the census, refer to the **1991 Census Catalogue**, Catalogue No. 92-302E. As well, you may contact your nearest Regional Reference Centre listed in the "Contacts" section of this publication.

Listed below are other products with presentation and content similar to this publication.

Regional Reference Centres

Statistics Canada's Regional Reference Centres provide a full range of census products and services. Each reference centre is equipped with a library and a sales counter where users can consult or purchase publications, microcomputer diskettes, microfiche, maps and more.

The staff of the Regional Reference Centres provides consultative and research services in addition to providing after-sales service and support, including seminars and workshops on the use of Statistics Canada information.

Each centre has facilities to retrieve information from Statistics Canada's computerized data retrieval systems CANSIM and E-STAT. A telephone inquiry service is also available with toll-free numbers for regional users outside local calling areas. Call, write, fax or visit the nearest Regional Reference Centre for more information.

Additional References and Services

In addition to Regional Reference Centres and depository libraries, Statistics Canada publications may be ordered through your **local bookstore** or **subscription agent**. Contact the nearest Regional Reference Centre for a list of Canadian outlets available, or consult the 1991 Census Catalogue (Catalogue No. 92-302E).

Secondary distributors offer data access and analytical support through a variety of consulting and computer-based services not available at Statistics Canada. The names and addresses of licensed distributors may be obtained from any Regional Reference Centre.

Statistics Canada provides **digital geographic products** which allow computer manipulation of geographic data. A customized retrieval service is available for users who wish to define their own geographic area of study. A variety of data retrieval files and services provide flexibility in selecting a geographic base.

A complete description of available digital files and services is documented in the 1991 Census Catalogue (Catalogue No. 92-302E).

Information concerning **census of agriculture products and services** may be referenced in the 1991 Census of Agriculture Products and Services publication, Catalogue No. 92-303, or by calling toll free 1-800-465-1991.

Users with special data requirements may request **post-census survey services**. Data are made available on microcomputer diskettes for use with spreadsheet software, or on paper output. For additional information, please contact the nearest Regional Reference Centre.

The Electronic Data Dissemination Division (EDDD) is responsible for CANSIM, Statistics Canada's computerized database network and information retrieval service. Users are provided with access to current and historical statistics in various forms including specialized data manipulation and analysis packages, graphics facilities and a bibliographic search service. For more information about CANSIM, contact any Regional Reference Centre.

Définitions

Seul un résumé des définitions des termes géographiques et des concepts du recensement est présenté ici. Les utilisateurs doivent consulter le **Dictionnaire du recensement de 1991** (nº 92-301F au catalogue) pour les définitions complètes et les observations additionnelles pertinentes.

Activité

Activité sur le marché du travail des personnes en âge de travailler qui, au cours de la semaine ayant précédé le 4 juin 1991, étaient occupées ou chômeuses. Les autres personnes en âge de travailler sont classées dans la catégorie des inactifs. Les données portent sur les personnes âgées de 15 ans ou plus, à l'exclusion des pensionnaires d'un établissement institutionnel.

Âge

Âge au dernier anniversaire de naissance (à la date de référence du recensement, soit le 4 juin 1991). Cette variable est établie d'après la réponse à la question sur la date de naissance qui demande le jour, le mois et l'année de naissance. Les personnes qui ne connaissaient pas la date exacte de leur naissance devaient donner la meilleure estimation possible.

Division de recensement (DR)

Terme générique qui désigne les régions géographiques établies en vertu de lois provinciales et qui constituent les régions intermédiaires entre la subdivision de recensement et la province (par exemple, divisions, comtés, districts régionaux, municipalités régionales et sept autres genres de régions géographiques formées de groupes de subdivisions de recensement).

Les lois provinciales de Terre-Neuve, du Manitoba, de la Saskatchewan et de l'Alberta ne prévoient pas la création de ces régions administratives. C'est pourquoi les divisions de recensement ont été établies par Statistique Canada en collaboration avec les provinces.

Langue maternelle

Première langue apprise à la maison dans l'enfance et encore comprise par le recensé au moment du recensement.

Les instructions suivantes du Guide du recensement de 1991 ont été fournies aux personnes recensées :

Indiquez la première langue apprise à la maison avant d'aller à l'école. Si cette langue n'est plus comprise, indiquez la deuxième langue apprise.

Si plus d'une langue est comprise, indiquez celle apprise en premier lieu à la maison. Si deux langues ont été apprises simultanément, indiquez la langue le plus souvent parlée à la maison dans l'enfance. Si les deux langues étaient utilisées également, indiquez-les toutes les deux.

S'il s'agit d'un enfant n'ayant pas encore appris à parler, indiquez la première langue que cet enfant apprendra à la maison. S'il apprend deux langues simultanément, indiquez

la langue dans laquelle on lui parlera le plus souvent. Si les deux langues sont utilisées **également**, indiquez-les **toutes les deux**.

Si une personne parle une langue **indienne** (de l'**Inde**), n'indiquez pas l'indien, mais plutôt la langue précise telle que l'hindi, l'ourdou ou le pendjabi.

Si une personne parle une langue amérindienne (indien(ne) de l'Amérique du Nord); indiquez une langue précise telle que le cri ou l'ojibway.

Minorité de langue officielle

La minorité de langue officielle est de langue anglaise au Québec et de langue française dans toutes les autres provinces et territoires. La taille de la minorité de langue officielle est établie au Québec en ajoutant aux personnes qui ont l'anglais comme première langue officielle parlée la moitié de la population ayant l'anglais et le français comme première langue officielle parlée. À l'extérieur du Québec, la minorité de langue officielle comprend les personnes qui ont le français comme première langue officielle parlée et la moitié du nombre de personnes ayant l'anglais et le français comme première langue officielle parlée.

Population active expérimentée

Personnes qui, au cours de la semaine ayant précédé le 4 juin 1991, étaient occupées ou en chômage et avaient travaillé depuis le 1 er janvier 1990. On détermine la population active expérimentée en retranchant de la population active totale les chômeurs âgés de 15 ans ou plus qui n'ont jamais travaillé ou qui ont travaillé seulement avant le 1 er janvier 1990.

Population active inexpérimentée

Personnes en chômage âgées de 15 ans ou plus qui n'avaient jamais travaillé ou qui avaient travaillé seulement avant le 1er janvier 1990.

Première langue officielle parlée

Cette variable a été dérivée dans le cadre de l'application de la Loi sur les langues officielles.

La méthode de dérivation est décrite dans le règlement concernant l'emploi des langues officielles dans les services au public. Elle tient compte, premièrement, de la connaissance des langues officielles, deuxièmement, de la langue maternelle et, troisièmement, de la langue parlée à la maison.

Les personnes qui peuvent soutenir une conversation en français seulement ont le français comme première langue officielle parlée. Les personnes qui peuvent soutenir une conversation en anglais seulement ont l'anglais comme première langue officielle parlée. Les réponses aux questions relatives à la langue maternelle et à la langue parlée à la maison sont ensuite utilisées pour établir la première langue officielle des personnes qui peuvent parler le français et l'anglais ou qui ne parlent ni l'une ni l'autre des langues officielles. On inclut dans la catégorie « Français » les personnes qui ont le français seulement ou le français et au moins une langue non officielle

comme langue maternelle. Les personnes qui ont l'anglais seulement ou l'anglais et au moins une langue non officielle comme langue maternelle sont incluses dans la catégorie « Anglais ».

Pour les cas non encore classés, on assigne la catégorie « Français » aux personnes ayant le français seulement ou le français et au moins une langue non officielle comme langue parlée à la maison. On procède de la même manière pour l'anglais. La population se trouve ainsi classée en deux catégories principales : d'une part le français et d'autre part l'anglais. Il faut rajouter deux catégories résiduelles pour les personnes inclassables au moyen de l'information disponible : a) le français et l'anglais et b) ni le français ni l'anglais.

Province

Principale division politique du Canada. Du point de vue statistique, il s'agit d'une unité de base selon laquelle les données sont totalisées et recoupées.

Région métropolitaine de recensement (RMR)

Le concept général de région métropolitaine de recensement (RMR) s'applique à un grand noyau urbain ainsi qu'aux régions urbaines et rurales adjacentes dont le degré d'intégration économique et sociale avec ce noyau urbain est très élevé.

Une RMR est délimitée à partir d'un noyau urbanisé lorsque ce dernier compte au moins 100,000 habitants, d'après les résultats du dernier recensement. Lorsqu'une région devient une RMR, elle continue de faire partie du programme même si, ultérieurement, elle subit une baisse de population.

Les régions urbaines de plus petite taille, dont le noyau urbanisé compte au moins 10,000 habitants, sont comprises dans le programme des agglomérations de recensement (AR).

Sexe

Qualité d'homme ou de femme.

Subdivision de recensement (SDR)

Terme générique qui désigne les municipalités (telles que définies par les lois provinciales) ou leur équivalent, par exemple les réserves indiennes, les établissements indiens et les territoires non organisés.

À Terre-Neuve, en Nouvelle-Écosse et en Colombie-Britannique, l'expression désigne également les régions géographiques créées par Statistique Canada, en collaboration avec les provinces, comme équivalents des municipalités.

Territoire

Il s'agit de deux grandes divisions politiques du Canada, soit le Yukon et les Territoires du Nord-Ouest. Du point de vue statistique, ces territoires sont l'équivalent des provinces, c'est-à-dire une unité de base pour laquelle des données sont totalisées et recoupées.

Qualité des données

Généralités

Le recensement de 1991 a été une entreprise complexe et de grande envergure. Bien que l'on ait déployé des efforts considérables pour assurer le respect des normes élevées tout au cours des opérations de la collecte et du traitement, il est inévitable que les estimations résultantes soient entachées d'erreurs. Il faut que les utilisateurs des données du recensement sachent que ces erreurs existent et qu'ils aient une idée générale de ses principales composantes afin d'être en mesure de déterminer si les données produites peuvent leur être utiles et d'évaluer les risques auxquels ils s'exposent en tirant des conclusions ou en prenant des décisions à partir de ces données.

Des erreurs peuvent se produire pratiquement à toutes les étapes du recensement, depuis la préparation des documents jusqu'au traitement des données, en passant par l'établissement des listes de logements et la collecte des données. Certaines erreurs, qui surviennent plus ou moins au hasard, ont tendance à s'annuler lorsque les réponses fournies par les divers répondants sont agrégées pour un groupe assez important. Dans le cas des erreurs de cette nature, l'estimation correspondante sera d'autant plus précise que le groupe visé sera grand. C'est pourquoi on conseille aux utilisateurs de faire preuve de prudence lorsqu'ils utilisent des estimations relatives à de petits groupes. Toutefois, certaines erreurs peuvent survenir de facon plus systématique et introduire un «biais» dans les estimations. Comme ce biais persiste quelle que soit la taille du groupe pour lequel les réponses sont agrégées et comme il est particulièrement difficile d'en mesurer l'importance, les erreurs systématiques posent pour la plupart des utilisateurs de données des problèmes plus graves que les erreurs aléatoires mentionnées plus haut.

En ce qui concerne les données du recensement en général, les principaux types d'erreur sont les suivants :

- les erreurs de couverture qui se produisent lorsqu'on oublie des logements et/ou des personnes, qu'on les englobe à tort ou qu'on les compte deux fois;
- les erreurs dues à la non-réponse qui surviennent lorsque l'on n'a pu obtenir de réponses d'un petit nombre de ménages et/ou de personnes en raison d'une absence prolongée ou pour toute autre raison;
- les erreurs de réponse qui surviennent lorsque le répondant, ou parfois le recenseur, a mal interprété une question du recensement et a inscrit une mauvaise réponse;
- les erreurs de traitement qui peuvent se produire à diverses étapes, notamment au codage, lorsque les réponses en lettres sont converties en codes numériques; à la salsie des données, lorsque les préposés à l'entrée des données transfèrent sur bandes pour ordinateur les réponses figurant au questionnaire du recensement; à l'imputation, lorsqu'une réponse «valide», mais pas nécessairement exacte, est insérée dans un enregistrement par l'ordinateur pour remplacer une réponse manquante ou «invalide» («valides» et «invalides» renvoient à la cohérence de la

réponse, compte tenu des autres renseignements compris dans l'enregistrement);

les erreurs d'échantillonnage qui s'appliquent uniquement aux questions supplémentaires figurant dans le questionnaire complet distribué à un échantillon de un cinquième des ménages; elles résultent du fait que les réponses à ces questions, une fois pondérées pour représenter l'ensemble de la population, diffèrent inévitablement des résultats que l'on aurait obtenus si l'on avait posé ces questions à tous les ménages.

Les types d'erreur mentionnés plus haut ont tous une composante aléatoire et une composante systématique. Toutefois, la composante systématique de l'erreur d'échantillonnage est d'ordinaire très petite comparativement à sa composante aléatoire. Dans le cas des autres erreurs non dues à l'échantillonnage, tant la composante aléatoire que la composante systématique peuvent être importantes.

Erreurs de couverture

Les erreurs de couverture ont une incidence directe sur la précision des chiffres du recensement, c'est-à-dire sur la taille des divers univers du recensement : la population, les familles, les ménages et les logements. Bien que des mesures aient été prises pour corriger certaines erreurs identifiables, les chiffres définitifs sont toujours entachés d'une certaine erreur découlant du fait que des personnes ou des logements ont été oubliés, englobés à tort dans le recensement ou comptés deux fois.

L'oubli de logements ou de personnes se traduit par un sous-dénombrement. Des logements peuvent être oubliés en raison d'une mauvaise interprétation des limites du secteur de dénombrement (SD), ou du fait qu'ils sont cachés ou semblent inhabitables. Des personnes peuvent être oubliées parce que leur logement est oublié ou classé comme inoccupé ou quand certains membres du ménage sont omis sur le questionnaire parce que le répondant a mal interprété les instructions concernant les personnes à inclure. Enfin, certaines personnes peuvent être oubliées parce qu'elles n'ont pas de domicile habituel et qu'elles n'ont pas passé la nuit du recensement dans un logement.

Le dénombrement à tort ou le double compte de logements ou de personnes se traduit par un surdénombrement. Il peut y avoir surdénombrement des logements lorsque constructions impropres à l'habitation sont classées comme logements ou lorsque des unités d'habitation ne répondant pas à la définition du logement retenue pour les fins du recensement sont comptées séparément plutôt que d'être considérées comme faisant partie d'un logement plus grand. Il peut y avoir double compte des logements lorsqu'il existe, par exemple, une certaine ambiguité au sujet des limites des SD. Les personnes peuvent être comptées deux fois parce que leur logement a été compté deux fois ou parce que les lignes directrices concernant les personnes à inscrire dans le questionnaire ont été mal interprétées. À l'occasion, il arrive qu'une personne ne faisant pas partie de l'univers du recensement, comme un résident étranger ou une personne fictive, soit dénombrée à tort. En moyenne, le surdénombrement est moins susceptible de se produire que le sous-dénombrement; les chiffres des logements

et des personnes sont donc probablement légèrement sous-estimés.

En 1991, quatre études ont été entreprises afin d'évaluer les différents aspects de l'erreur de couverture. Premièrement, on a visité de nouveau un échantillon de logements classés comme inoccupés afin de vérifier s'ils étaient réellement inoccupés le jour du recensement. Les chiffres définitifs du recensement ont ensuite été corrigés pour tenir compte des personnes ou des ménages oubliés parce que leur logement a été classé par erreur comme inoccupé. Deuxièmement, on a prélevé un échantillon de personnes dénombrées comme résidents temporaires afin de vérifier si elles avaient ou non été dénombrées à leur domicile habituel. À partir de cet échantillon, on a établi des estimations du nombre de personnes oubliées parce qu'elles étaient temporairement absentes de leur domicile habituel, puis on a rectifié les chiffres définitifs de population en conséquence. Malgré ces rectifications, les chiffres définitifs sont encore sujets à un certain sous-dénombrement. Une troisième étude, connue sous le nom de contre-vérification des dossiers, est réalisée pour déterminer l'importance de ce sous-dénombrement résiduel, pour le Canada dans son ensemble ainsi que pour chaque province et territoire, à l'occasion du recensement de 1991. Le sous-dénombrement tend à être plus élevé pour certains segments de la population comme les jeunes adultes de sexe masculin et les personnes récemment immigrées. quatrième étude, connue sous le nom d'étude surdénombrement, a pour objet d'étudier les erreurs surdénombrement. Ensemble. les résultats contre-vérification des dossiers de l'étude du et surdénombrement fournissent une estimation du sous-dénombrement net.

Autres erreurs non dues à l'échantillonnage

Alors que les erreurs de couverture ont une incidence sur le nombre d'unités comprises dans les divers univers du recensement, les autres erreurs influent sur les chiffres relatifs aux caractéristiques de ces unités.

Il est parfois impossible d'obtenir une réponse complète d'un ménage, même si le logement a été classé comme étant occupé et un questionnaire a été livré. Il se peut que les membres du ménage aient été absents pendant toute la période du recensement ou, en de rares occasions, que le membre responsable du ménage ait refusé de remplir le questionnaire. Il arrive plus souvent que le questionnaire soit retourné, mais qu'il y manque des données à certaines questions ou pour certaines personnes. Des efforts considérables sont déployés afin d'obtenir une réponse la plus complète possible. Les recenseurs contrôlent les questionnaires et assurent un suivi à l'égard de l'information manquante. Le travail du recenseur est ensuite vérifié tant par un surveillant que par un technicien du contrôle qualitatif. Malgré tout, il existe toujours un petit nombre de réponses manquantes à la fin de l'étape de la collecte. Bien que les entrées manquantes soient éliminées en cours de traitement en remplaçant chaque valeur manquante par la valeur correspondante figurant dans un enregistrement «similaire», il est possible que certaines erreurs de non-réponse s'y glissent. Cela est particulièrement grave lorsque les personnes non répondantes diffèrent des répondants sous certains aspects; en effet, cette procédure se traduira par l'introduction d'un **biais de non-réponse**.

Même lorsqu'une réponse est obtenue, il se peut qu'elle ne soit pas tout à fait exacte. Il est possible que le répondant ait mal interprété la question ou ait donné une réponse au jugé, surtout lorsqu'il répondait pour le compte d'un autre membre du ménage, qui était peut-être absent. Ces erreurs sont désignées sous le nom d'erreurs de réponse. Bien que ces erreurs surviennent d'ordinaire du fait que les répondants aient fourni des renseignements inexacts, elles peuvent aussi résulter d'erreurs commises par les recenseurs en remplissant certaines parties du questionnaire, comme le type de construction résidentielle, ou au moment du rappel effectué pour obtenir une réponse manquante.

Certaines questions du questionnaire du recensement nécessitent une réponse en lettres. Pendant le traitement, on attribue un code numérique à ces réponses. Il est possible que des erreurs de codage surviennent, surtout lorsque la liste de codes est longue (comme dans le cas de la langue, de l'origine ethnique, de l'industrie et de la profession) et que la réponse écrite est ambiguë, incomplète ou difficile à lire. On limite le nombre d'erreurs de codage, sans toutefois l'éliminer complètement, en vérifiant un échantillon des codes et en prenant des mesures correctives au besoin. Pour la première fois en 1991, une grande partie des tâches de codage ont été automatisées afin, entre autres, de réduire le nombre d'erreurs de codage.

Les renseignements figurant dans les questionnaires sont introduits sur clavier dans un fichier informatique. Deux méthodes de résolution ordonnée sont utilisées pour limiter le nombre d'erreurs à la saisie des données. Dans un premier temps, certains contrôles (comme des vérifications d'étendue) sont effectués à mesure que les données sont entrées. Dans un second temps, on introduit de nouveau sur clavier un échantillon tiré de chaque lot de documents, puis on compare les entrées résultantes aux entrées initiales. Si le nombre d'erreurs relevées au sein des entrées initiales dépasse un seuil prédéterminé, on reprend l'introduction sur clavier des données de tout le lot de documents.

Une fois les données saisies, elles sont envoyées à Ottawa où elles sont soumises à une série de contrôles informatiques visant à relever les réponses manquantes ou incohérentes. Dans le cas des réponses incohérentes, il faut d'abord définir ce que l'on entend par une réponse invalide. Les réponses invalides ou manquantes doivent ensuite être remplacées par des réponses valides, c'est-à-dire par des réponses qui sont compatibles avec les autres données figurant dans l'enregistrement. Dans un petit nombre de cas, il est possible de déduire la réponse correcte à partir des autres données de l'enregistrement. Toutefois, dans la majorité des cas, cela est impossible et on obtient une réponse valide à partir d'un enregistrement «donneur» prélevé au hasard parmi un groupe d'enregistrements cohérents qui sont pour un certain nombre de connexes similaires à celles caractéristiques l'enregistrement invalide. Bien sûr, rien ne garantit que la valeur imputée sera nécessairement identique à la réponse correcte pour la personne concernée. Cependant, pour autant que les enregistrements manquants ou invalides soient, en moyenne, similaires aux enregistrements valides, les **erreurs à l'imputation** s'annuleront plus ou moins une fois que les résultats auront été totalisés pour une région géographique ou un sous-groupe de population de taille suffisante.

Diverses études sont réalisées afin d'évaluer la qualité des réponses obtenues dans le cadre du recensement de 1991. Ainsi, on a calculé les taux de réponse et les taux de rejet au contrôle pour chaque question. Ces taux peuvent permettre de déterminer le potentiel de non-réponse et d'autres erreurs. De même, les totalisations établies à partir des données du recensement de 1991 ont été ou seront comparées avec les estimations correspondantes obtenues à partir des données des recensements précédents, des enquêtes-échantillon (comme l'Enquête sur la population active) et de divers dossiers administratifs (comme les registres des naissances et le cadastre municipal). Ces comparaisons peuvent permettre de cerner les problèmes de qualité éventuels ou, à tout le moins, de relever les divergences entre les sources.

Outre ces comparaisons entre données agrégées, certaines études de couplage de microdonnées sont actuellement menées afin de comparer les réponses de certains particuliers obtenues au recensement à celles d'une autre source de renseignements. Pour un certain nombre de caractéristiques «stables» (comme l'âge, le sexe, la langue maternelle, le lieu de naissance), on compare les réponses obtenues auprès d'un échantillon de personnes à l'occasion du recensement de 1991 aux réponses obtenues des mêmes personnes à l'occasion du recensement de 1986. De même, à la suite du recensement de 1991, un échantillon de personnes ont été dénombrées de nouveau surtout pour déterminer les taux de surdénombrement. En même temps, cela a permis aux intervieweurs de poser une série de questions détaillées sur la langue, l'origine ethnique et l'état matrimonial; les réponses données à ces questions seront comparées aux réponses correspondantes du recensement afin de reconnaître les erreurs de réponse et tenter de les comprendre.

Erreurs d'échantillonnage

Les estimations obtenues en pondérant les réponses recueillies auprès d'un échantillon sont susceptibles d'être entachées d'erreurs en raison de la répartition des caractéristiques au sein de l'échantillon qui n'est généralement pas identique à la répartition correspondante au sein de la population dans laquelle l'échantillon a été prélevé.

L'erreur susceptible d'être introduite par l'échantillonnage variera en fonction de la rareté relative de la caractéristique étudiée au sein de la population. Lorsque la valeur contenue dans la case est élevée, cette erreur sera relativement faible proportionnellement à cette valeur. Lorsque la valeur contenue dans la case est faible, cette erreur sera relativement importante proportionnellement à cette valeur.

L'erreur susceptible d'être introduite par l'échantillonnage est d'ordinaire exprimée sous forme d'«erreur type». Il s'agit de la racine carrée de la moyenne, calculée pour l'ensemble des échantillons de même taille prélevés selon le même plan d'échantillonnage, des carrés de l'écart de l'estimation obtenue

à partir de l'échantillon par rapport à la valeur pour l'ensemble de la population.

Le tableau ci-dessous fournit des mesures approximatives de l'erreur type due à l'échantillonnage. Ces mesures sont données uniquement à titre indicatif.

Tableau : Erreur type approximative introduite par l'échantillonnage pour les données-échantillon du recensement de 1991

Valeur contenue dans la case	Erreur type approximative
50 ou moins	15
100	20
200	30
500	45
1,000	65
2,000	90
5,000	140
10,000	200
20,000	280
50,000	450
100,000	630
500,000	1400

Les utilisateurs souhaitant déterminer l'erreur d'échantillonnage approximative pour une case de données dont la valeur a été obtenue à partir de l'échantillon de 20 % doivent choisir l'erreur type correspondant à l'entrée dans la colonne «Valeur contenue dans la case» ci-dessus qui se rapproche le plus de celle qui figure dans la case de données de la totalisation en cause. En utilisant la valeur ainsi obtenue pour l'erreur type, l'utilisateur peut, en général et à juste titre, être certain que la valeur réelle pour la population dénombrée (ne tenant pas compte des formes d'erreur autres que l'erreur d'échantillonnage) ne s'écarte pas de la valeur contenue dans la case dans une proportion supérieure ou inférieure à trois fois l'erreur type (p. ex., si la valeur contenue dans la case est 1,000, la fourchette à l'intérieur de laquelle se situe la valeur réelle serait de 1,000 \pm 3 \times 65 ou de 1,000 \pm 195).

Les erreurs types données dans le tableau ci-dessus ne s'appliquent pas aux totaux ou aux totaux partiels relatifs à la population ou aux univers (personnes, ménages, logements ou familles) pour la région géographique étudiée (voir Échantillonnage et pondération). On peut déterminer l'effet de l'échantillonnage pour ces valeurs en les comparant à celles des publications correspondantes contenant des données intégrales.

Il est à noter que l'effet du plan d'échantillonnage et de la méthode de pondération utilisés dans le cadre du recensement de 1991 variera d'une caractéristique à l'autre et d'une région géographique à l'autre. Il est donc possible que les valeurs de l'erreur type données dans le tableau ci-dessus sous-estiment ou surestiment l'erreur attribuable à l'échantillonnage.

Pour obtenir de plus amples renseignements sur la qualité des données du recensement, communiquer avec la Division des méthodes d'enquêtes sociales, Statistique Canada, Ottawa, Canada K1A 0T6, (613) 951-6940.

Confidentialité et arrondissement aléatoire

Afin de protéger le caractère confidentiel des renseignements fournis, les chiffres indiqués aux tableaux ont fait l'objet d'un arrondissement aléatoire qui supprime toute possibilité d'associer des données statistiques à une personne facilement reconnaissable. Selon cette méthode, tous les chiffres, v compris les totaux, sont arrondis de facon aléatoire (vers le haut ou vers le bas) jusqu'à un multiple de 5 et dans certains cas, de 10. Cette technique assure une protection efficace contre la divulgation sans ajouter d'erreur significative dans les données Cependant, elle entraîne certaines du recensement. conséquences pour les utilisateurs. Comme les totaux sont arrondis séparément, ils ne correspondent pas nécessairement à la somme des chiffres arrondis séparément dans les répartitions. De plus, il faut s'attendre à ce que les totaux et les autres chiffres correspondants dans diverses totalisations du recensement présentent quelques légères différences. De même, la somme des pourcentages, qui sont calculés à partir de chiffres arrondis, ne correspond pas forcément à 100. Les répartitions en pourcentage et les taux sont dans la plupart des cas basés sur des données arrondies, alors que les variations en pourcentage et les moyennes sont basées sur des données non arrondies. La distorsion importante pouvant résulter de l'arrondissement aléatoire dans le cas des cases de faible valeur mérite aussi d'être signalée. Cette distorsion peut entraîner une perte de précision pour les cases de données renfermant des chiffres peu élevés.

Les utilisateurs devraient, lors de l'agrégation des données arrondies, être conscients de cette distorsion. Les erreurs dues à l'arrondissement ont tendance à s'annuler lorsque les chiffres contenus dans les cases sont agrégés de nouveau. Cependant, il est possible de réduire les distorsions en intégrant dans la mesure du possible les totaux partiels appropriés dans les totalisations.

Les utilisateurs désirant obtenir un maximum de précision peuvent aussi choisir de demander des totalisations personnalisées. Dans le cas de produits personnalisés, l'agrégation se fait à partir des enregistrements dans la base de données du recensement se rapportant aux particuliers. L'arrondissement aléatoire a lieu uniquement après que les cases de données ont été agrégées, ce qui réduit la distorsion au minimum.

Outre l'arrondissement aléatoire, on a adopté d'autres techniques, comme la **suppression des régions**, afin d'assurer encore mieux la confidentialité des réponses des particuliers.

Dans le cadre de la **suppression des régions**, toutes les données caractéristiques se rapportant aux régions géographiques dont la population est inférieure à une taille donnée sont supprimées. L'importance de la suppression est fonction des facteurs suivants :

 si les données sont totalisées à partir d'une base de données intégrales, la suppression est fondée sur la population totale;

- si les données sont totalisées à partir d'une base de données-échantillon, la suppression est fondée sur la population excluant les pensionnaires d'établissements institutionnels:
- si les données renferment une répartition du revenu, on supprime les données relatives aux régions dont la population est inférieure à 250 personnes;
- si les données ne renferment aucune répartition du revenu, on supprime les données relatives aux régions dont la population est inférieure à 40 personnes.

Dans tous les cas, les données supprimées sont incluses dans les totaux ou totaux partiels du niveau d'agrégation supérieur approprié.

Cette technique est appliquée à tous les produits renfermant des données infraprovinciales (c.-à-d. la série des Profils, les tableaux sommaires de base, les produits personnalisés et semi-personnalisés), qu'il s'agisse de données intégrales ou de données-échantillon.

Échantillonnage et pondération

Les données du recensement de 1991 sont soit des données intégrales (c.-à-d. recueillies auprès de l'ensemble des ménages), soit des données-échantillon (c.-à-d. recueillies auprès d'un échantillon aléatoire de ménages) que l'on a pondérées pour obtenir des estimations pour l'ensemble de la population. Les données du présent rapport ont été recueillies auprès d'un échantillon de 20 % et pondérées pour compenser pour l'échantillonnage. Tous les en-têtes de tableaux sont annotés en conséquence. On notera que, dans la plupart des réserves indiennes et les régions éloignées, toutes les données ont été recueillies auprès de l'ensemble de la population.

Il est possible que, pour une région géographique donnée, le total ou le total partiel pondéré de la population, des ménages, des logements ou des familles diffère du chiffre correspondant figurant dans les publications contenant des données intégrales. Ces variations (en plus de l'effet de l'arrondissement aléatoire) sont attribuables à l'échantillonnage.

Notes spéciales

Chiffres de population basés sur la résidence habituelle

Les chiffres de population présentés ici pour les différentes régions géographiques indiquent le nombre de Canadiens qui y ont leur lieu habituel de résidence, sans égard au lieu où ils se trouvaient le jour du recensement. Sont également comptés les Canadiens séjournant dans un logement de la région en cause le jour du recensement et n'ayant pas de lieu habituel de résidence ailleurs au Canada, de même que ceux qui sont considérés comme des «résidents non permanents» (voir le nota au sujet de ce groupe). Dans la plupart des régions, il n'y a guère de différence entre le nombre de résidents habituels et le nombre de personnes séjournant dans la région le jour du recensement. Toutefois, dans certains endroits, comme les

lieux de villégiature et les régions où sont situés des camps de chantier importants, la différence entre ces deux chiffres peut être importante.

Réserves indiennes et établissements indiens partiellement dénombrés

Lors du recensement de 1991, le dénombrement n'a pas été autorisé sur certaines réserves indiennes et établissements indiens ou a été interrompu avant d'être mené à terme. De plus, certaines réserves indiennes et établissements indiens ont été dénombrés tardivement ou la qualité des données recueillies a été jugée insuffisante. Ces régions géographiques (un total de 78) sont appelées réserves indiennes et établissements indiens partiellement dénombrés.

Les données de 1991 ne sont pas disponibles pour les réserves indiennes et les établissements indiens partiellement dénombrés et ne sont pas comprises dans les totalisations. Les données sur les régions géographiques ayant une ou plusieurs de ces réserves ou établissements font donc l'objet d'un nota approprié. En raison des données manquantes, les utilisateurs doivent prendre note que les comparaisons (p. ex., des variations en pourcentage) entre 1986 et 1991 ne sont pas exactes pour les régions géographiques en cause. L'effet des données manquantes est très faible pour les régions géographiques de niveau plus élevé (Canada, provinces, régions métropolitaines de recensement et agglomérations de recensement) mais peut être plus important pour les petites régions où les réserves et établissements indiens en cause représentent une proportion plus grande de la population.

Une liste des réserves indiennes et établissements indiens partiellement dénombrés en cause ainsi que les chiffres de la population et des logements privés occupés des deux derniers recensements (si les données sont disponibles) a été dressée et est présentée à l'annexe 1.

Résidents non permanents

Pour la première fois en 1991, le recensement de la population inclut à la fois les résidents permanents et les résidents non permanents. Les résidents non permanents comprennent les titulaires d'un permis de séjour pour étudiants, d'un permis de travail, d'un permis ministériel et les revendicateurs du statut de réfugié.

Lors des recensements antérieurs, seuls les résidents permanents du Canada étaient inclus dans le recensement (exception faite pour 1941). Les résidents non permanents étaient considérés comme des résidents étrangers et n'étaient pas dénombrés.

Présentement au Canada, les résidents non permanents forment un segment croissant de la population. Leur présence peut avoir une influence sur la demande de services gouvernementaux tels que les soins de santé, l'éducation et les programmes d'emploi. L'inclusion des résidents non permanents au recensement de 1991 facilitera aussi la comparaison avec les statistiques provinciales et territoriales (mariages, divorces, naissances et décès) qui incluent cette population. En outre, la définition du recensement permet maintenant de mieux refléter la recommandation des Nations

Unies, à savoir que les résidents à long terme (personnes demeurant dans un pays pour un an ou plus) soient dénombrés.

Le total des chiffres de population, de même que ceux de toutes les variables du questionnaire, seront touchés par ce changement à l'univers du recensement de 1991. D'après les résultats du recensement de 1991, il y avait 223 410 résidents non permanents au Canada, ce qui représente un peu moins de 1 % de la population totale. Les utilisateurs doivent faire preuve d'une très grande prudence lorsqu'ils comparent des données de 1991 avec celles de recensements antérieurs pour des régions géographiques où la concentration de résidents non permanents est importante. Celles-ci comprennent les principales régions métropolitaines de l'Ontario, de la Colombie-Britannique et du Québec. La répartition de la population des résidents non permanents pour les provinces, les territoires et les régions métropolitaines de recensement est présentée à l'annexe 2.

Même si tous les efforts possibles ont été déployés pour dénombrer les résidents non permanents, le dénombrement de cette population n'est pas aussi complet que celui des résidents permanents. Des facteurs tels que les problèmes linguistiques et la réticence à remplir un formulaire du gouvernement ou de comprendre l'utilité de leur participation peuvent avoir influé sur le dénombrement des résidents non permanents et s'être traduits par un sous-dénombrement.

Indice de qualité des données pour les subdivisions de recensement

En général, le recensement a été en mesure d'obtenir les chiffres exacts de la population et des logements en plus d'obtenir des taux de réponse élevés aux questions du recensement pour toutes les régions géographiques du Canada. Cependant, certaines subdivisions de recensement, en grande partie des réserves indiennes et des établissements indiens, ont accusé des taux de non-réponse très élevés pour quelques questions du recensement en dépit du fait que les chiffres de la population et des logements étaient exacts.

Un indice de qualité des données basé sur deux taux de non-réponse est fourni pour certaines subdivisions de recensement (SDR) afin de refléter cette situation. Le premier taux de non-réponse est un taux global égal au pourcentage de réponses requises laissées sans réponse par les répondants. Toutes les questions du recensement publiées et exclusives au questionnaire complet ont été considérées dans le calcul de ce taux global (dans le cas des questions sur le revenu, seules les questions sur le revenu total et sur les salaires et traitements ont été considérées). L'ordre de grandeur de ce taux global est indiqué dans les totalisations de la façon suivante

Moins de 5 % : aucune indication 5 % jusqu'à moins que 25 % : ◆ 25 % ou plus : ◆◆

Les totalisations des SDR affichant un losange noir doivent être utilisées avec précaution. Les totalisations des SDR affichant deux losanges noirs (indiquant un taux global de non-réponse de 25 % ou plus) ne sont pas diffusées.

Le deuxième taux de non-réponse est calculé de la même façon que le taux global de non-réponse mais en ne considérant que les questions sur le logement exclusives au questionnaire complet. Ce taux n'est calculé que pour les totalisations qui sont diffusées. L'ordre de grandeur de ce taux de non-réponse sur le logement est indiqué dans les totalisations de la façon suivante:

Moins que 25 % : aucune indication 25 % ou plus : ♦

Les totalisations des questions sur le logement affichant un losange blanc sont diffusées mais devraient être utilisées avec extrême précaution vu les taux élevés de non-réponse pour ces questions. On constate que, dans certains cas, les losanges noirs et blancs peuvent apparaître ensemble.

Vu que le phénomène de la non-réponse élevée est très localisé, les données non diffusées au niveau des SDR sont toutefois incluses dans les totalisations à tous les niveaux géographiques plus élevés. Ces totalisations ne font pas l'objet d'un nota particulier.

Autres produits connexes

La gamme de produits du recensement de 1991 est conçue pour satisfaire les divers besoins de nos utilisateurs. Nous offrons une grande diversité de produits et services du recensement de la population de 1991. Ils sont divisés en cinq catégories.

- (1) Les produits de référence sont conçus pour faciliter l'utilisation des produits et des services; ils aident les utilisateurs à reconnaître leurs besoins, à trouver et à interpréter les données.
- (2) Les produits de données offrent un vaste éventail de données du recensement pour les régions géographiques normalisées sur les caractéristiques sociales, culturelles et économiques des Canadiens.
- (3) Les produits analytiques sont des publications qui expliquent les données du recensement de 1991 sur un grand nombre de thèmes ou de sujets, dont les résultats sont présentés dans un style facile à comprendre.
- (4) Le **service des totalisations** établit des totalisations pour les utilisateurs qui veulent des données sous une forme plus détaillée ou plus précise que ce que l'on trouve dans les publications normalisées.
- (5) On offre des ateliers et des séminaires aux nouveaux utilisateurs et aux utilisateurs actuels pour les informer sur les données du recensement et pour les aider à en tirer le maximum en fonction de leurs besoins.

Pour de plus amples renseignements sur les produits et services du recensement offerts, consultez le **Catalogue du recensement de 1991**, nº 92-302F au catalogue. Vous pouvez également contacter le centre régional de consultation le plus près indiqué à la section «Pour renseignements» de la présente publication.

Vous trouverez ci-après une liste d'autres produits ayant une présentation et un contenu semblables à cette publication.

Centres régionaux de consultation

Les centres régionaux de consultation de Statistique Canada offrent une gamme complète des produits et services du recensement. On y trouve une bibliothèque et un comptoir de vente où les utilisateurs peuvent consulter ou acheter les différents produits, dont les publications, les disquettes de micro-ordinateurs, les microfiches et les cartes.

Le personnel des centres régionaux de consultation fournit des services de consultation et de recherche en plus du service après-vente, y compris des séminaires et des ateliers sur l'utilisation des données de Statistique Canada.

Chaque centre vous offre la possibilité d'extraire de l'information des systèmes d'extraction des données informatisés CANSIM et E-STAT de Statistique Canada. Un service de renseignements téléphonique est également disponible; ce service est gratuit pour les utilisateurs se trouvant à l'extérieur des secteurs d'appels locaux. Téléphonez, écrivez, télécopiez ou visitez le centre régional de consultation le plus près pour de plus amples renseignements.

Autres références et services

Vous pouvez vous procurer les publications de Statistique Canada dans les centres régionaux de consultation et dans les bibliothèques de dépôt, ou vous pouvez également les commander par l'entremise de votre **librairie** ou de votre **agent d'abonnement**. Pour obtenir une liste des points de vente au Canada, communiquez avec le centre régional de consultation le plus près, ou consultez le Catalogue du recensement de 1991 (nº 92-302F au catalogue).

Les distributeurs secondaires présentent à leurs clients des possibilités d'accès aux données et un soutien aux analyses grâce à une diversité de services de consultation et de services informatisés que n'offre pas Statistique Canada. Vous pouvez obtenir les noms et adresses des distributeurs autorisés dans un centre régional de consultation.

Statistique Canada offre des **produits géographiques numériques** qui permettent la manipulation informatique des données géographiques. Un service d'extraction des données personnalisé permet aux utilisateurs de délimiter eux-mêmes, s'ils le désirent, la région géographique qu'ils veulent étudier. La gamme de fichiers d'extraction des données et de services offre une grande flexibilité dans la sélection d'une base géographique.

Vous trouverez dans le Catalogue du recensement de 1991 (nº 92-302F au catalogue), la description complète des fichiers numériques et des services.

On peut obtenir des renseignements sur les produits et services du recensement de l'agriculture en consultant la publication Produits et services du recensement de l'agriculture de 1991, nº 92-303 au catalogue, ou en téléphonant sans frais au 1-800-465-1991.

Les utilisateurs qui ont besoin de données spéciales peuvent demander les services des enquêtes postcensitaires. Les données sont présentées sur disquettes pour micro-ordinateur pouvant être utilisées avec un programme de calcul de tableaux financiers ou sur support papier. Pour de plus amples renseignements, communiquez avec le centre régional de consultation le plus près.

La Division de la diffusion informatique des données (DDID) est responsable du CANSIM qui consiste en un réseau de bases de données informatisées et un service d'extraction des données de Statistique Canada. Les utilisateurs ont accès aux statistiques actuelles et historiques de diverses façons, notamment grâce aux progiciels spécialisés de manipulation et d'analyse des données, aux ressources graphiques et au service de recherche bibliographique. Pour de plus amples renseignements sur le CANSIM, communiquez avec un centre régional de consultation.

Notes, Footnotes and Abbreviations

Note(s)

Comparison of the 1991 Census data with data from earlier censuses is affected by a change in the definition of the 1991 Census population. Persons in Canada on student authorizations, employment authorizations, Minister's permits, and as refugee claimants were enumerated in the 1991 Census but not in previous censuses. These persons are referred to as non-permanent residents. For further information, see the "Special Notes" section.

- .. Figures not available.
- ... Figures not appropriate or not applicable.
- Nil or zero.
- † Excludes Census data for one or more incompletely enumerated Indian reserves or Indian settlements. For further information, see the "Special Notes" section.
- ¶ Incompletely enumerated Indian reserve or Indian settlement. For further information, see the "Special Notes" section.
- Data quality index showing a global non-response rate higher than or equal to 5% and lower than 25%. For further information, see the "Special Notes" section.
- Data quality index showing a global non-response rate higher than or equal to 25%. For further information, see the "Special Notes" section.
- Data quality index showing a global non-response rate for the housing questions which is higher than or equal to 25%. For further information, see the "Special Notes" section.

Nota, Renvois et Abréviations

Nota

La comparaison des données du recensement de 1991 avec celles des recensements précédents est affectée par la modification apportée à la définition de la population du recensement de 1991. Les titulaires d'un permis de séjour pour étudiants, d'un permis de travail, d'un permis ministériel et les revendicateurs du statut de réfugié ont été dénombrés au recensement de 1991, mais ne l'ont pas été aux recensements antérieurs. Ces personnes sont des résidents non permanents. Pour plus de renseignements, voir la section «Notes spéciales».

- Nombres non disponibles.
- ... N'ayant pas lieu de figurer.
- Néant ou zéro.
- † Ne comprend pas les données du recensement pour une ou plusieurs réserves indiennes ou établissements indiens partiellement dénombrés. Pour plus de renseignements, voir la section «Notes spéciales».
- ¶ Réserve indienne ou établissement indien partiellement dénombré. Pour plus de renseignements, voir la section «Notes spéciales».
- ◆ Indice de qualité des données indiquant un taux global de non-réponse supérieur ou égal à 5 % mais inférieur à 25 %. Pour plus de renseignements, voir la section «Notes spéciales».
- ◆◆ Indice de qualité des données indiquant un taux global de non-réponse supérieur ou égal à 25 %. Pour plus de renseignements, voir la section «Notes spéciales».
- Indice de qualité des données indiquant un taux global de non-réponse aux questions sur le logement qui est supérieur ou égal à 25 %. Pour plus de renseignements, voir la section «Notes spéciales».
